Art Unit: 3743

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-21 and 41-46, drawn to a medication delivery apparatus, classified in class 128, subclass 200.19.
- II. Claims 22-40, drawn to a method of delivering an aerosol medication, classified in class 128, subclass 203.15.

Inventions of Group I and Group II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the method claims pertain to a device that introduces the medication to a holding chamber wherein the apparatus claims pertain to a device that doesn't necessarily introduce medicament to the holding chamber. Therefore, this would require the examiner to conduct two separate searches for either a device that has medication flowing through the holding chamber wherein another search will not necessarily need a medicament flowing through the holding chamber.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required for Group I, restriction for examination purposes as indicated is proper.

This application contains claims directed to the following patentably distinct species of the claimed invention: an antistatic holding chamber comprising a plastic material having a surface resistivity of between about 10E10 and about 10E12 ohm/sq (claims 1-8, 22-28, 41-44) or a component separate from the holding chamber comprising a material having a surface resistivity of between about 10E10 and about 10E12 ohm/sq (claims 9-21 and 29-40).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 45 is generic since the antistatic component may be one of a holding chamber, mouthpiece or backpiece (component separate from holding chamber).

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added.

An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by

Art Unit: 3743

37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Andrew M. Bunin whose telephone number is (571)272-4801. The examiner can normally be reached on Monday - Friday, 8 am - 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Henry Bennett can be reached on (571)272-4791. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
